

Wood Products Track & Trace

Inventory tracking of wood products from seedling to finished wood product

Seedling

Maturation

Harvesting

Logyard

Sawmilling

Kiln Drying

Planing

Packaging and Retail

IBC's Wood Products Track and Trace solution provides end to end traceability for diversified forestry companies looking to get real time data using automated information data collection (AIDC) tools writing to an integrated database.

Using 1D Bar Codes, 2D Bar Codes, and Radio Frequency Identification (RFID), IBC's Wood Products Track and Trace allows users in a value chain to authenticate raw material, work in progress, and finished product throughout the supply chain to prevent the accidental or intentional introduction of illegitimate material.

Designed For:

- Dimensional Lumber
- Boards
- Plywood, Veneer, and Sheeted Goods
- OSB & Engineered Wood

With access control and authentication privileges you can control what information is retrievable to users and stakeholders. Using an integrated database you can track finished lumber all the way back to its initial growth as a seedling, and using our reporting infrastructure you can automatically generate reports to be pushed to key stakeholders for receiving, quality control, operations management, auditing, packaging, and even re-manufacturing.

With IBC's one-vendor solution you have all of the Printers, Printer Applicators, Handheld Mobile Computers, Fixed Mount Scanners, Labels, Tags, Software and Service needed to introduce or integrate a secure lumber traceability system.

Wood Products Track & Trace

Integrated Database Management

IBC's Wood Products Track & Trace solution captures and reconciles all the data generated in wood production into an integrated database. Whether you're originating seedling genetics in the tree nursery, scanning trees in the woodlands, receiving into a logyard, or processing it in a sawmill, kiln, or planer IBC helps you collect that secured data and provide it in real time to stakeholders and decision makers.
